Subject: CPM PD estimates and timeline questions

Hello everyone,

As part of the proposed CPM 6th-8th grade math adoption, CPM provides 4 full days of initial training, which can be broken into 2 separate consecutive day sessions (6.5 hours with extended contract), 3 full days of follow-up training, and 1 one-on-one day (no sub time required) for each teacher with a coach. They run separate trainings by grade level and can accommodate 30-40 teachers at a time. Based on the number of teachers we have this year, this would require two 6th grade, one 7th grade, and one 8th grade sessions.

Amber, Matt, and I brainstormed this morning about the math adoption timeline in connection with best practices for PD support. It would be ideal to offer the first two days of PD before the end of this school year or early in the summer so teachers have time to “play” with the materials over the summer. Then offer the second two day so of initial PD the week before inservice.

Because we would need to run a total of 8 PD days to cover four groups (two 6th grade, one 7th grade, and one 8th grade) before the end of the school year if we wanted to require all teachers to attend the training, the May 28th Board Meeting date currently scheduled for the approval vote, would not leave us much time to order materials and run this PD. If we offer teachers a choice of during the school year or two days of extended contract the week after school is out, we might only have to run one 6th grade group with sub coverage, reducing the 8 days of PD to 6 days.

We could look at moving the board’s first reading to the April 9th work session, and then the approval to the April 23rd board meeting, but this might create negative public perception with a rushed process. We could move all PD to the summer, but then could not require teachers to attend. In either case, we need to work on crafting an update to help fully inform the CCAC and the Board of where we are in the process to help the review, recommendation, first reading, and approval process run smoothly.

Below is a spreadsheet with estimated PD costs. It reflects the current 6th-8th grade math teachers we have, and does not account for teachers who teach multiple grades attending more than one session (Amber is working to clarify this point with CPM).

Candace confirmed middle school numbers with each school; we originally used information from the school websites. Here is the updated spreadsheet.
